Detailed analysis

File 1: /work/project/dataset/clean/modifier_reentrancy_fixed.sol

Similarity score: 0.580

Source lines: 1-42

► Finding 1.1: Vulnerability found (Medium)

Vulnerable code

```
supportsToken hasNoBalance functions
```

Explanation

The function call order allows arbitrary inclusion of files by manipulating the contract 'Nu Token' through the supportsToken() function, potentially exposing sensitive information or allowing unauthorized operations.

Impact

Potential source code disclosure or configuration exposure

Execution path

```
'''
1. Attacker calls supportsToken() -> 2. Function returns keccak256 hash of 'Nu
Token' -> 3. Comparison with 'msg.sender's local file system for 'Nu Token'
contract -> 4. Potential Local File Inclusion vulnerability if attacker
provides matching 'Nu Token'
'''
```

Parameters

contract 'Nu Token'

Exploitation steps

- Call supportsToken() function
- Provide manipulated contract name 'Nu Token'
- If the system is vulnerable, include arbitrary local files

Example payloads

- attackerContractName

Conditions

Attacker has ability to call supportsToken() function

Remediation

Use allowlists for contract names and validate input properly.
