Similarity score: 0.594

Source lines: 1-42

► Finding 1.1: Remote File Inclusion vulnerability (High)

Vulnerable code

```
bank = new Bank();
```

Explanation

The 'new' keyword is used to instantiate a contract, but the URL provided as an argument can lead to remote file inclusion if not properly validated.

Impact

Remote code execution

Entry point

/

Execution path

```
ContractModLoader -> new Bank()
```

HTTP methods

constructor

Parameters

URL provided to 'new' function

Exploitation steps

- Send a malicious contract URL as the argument for the 'new' function
- The malicious contract is instantiated
- The malicious code is executed

Example payloads

- `https://attacker.com/maliciousContract.sol`

Conditions

Attacker can manipulate the URL provided to the 'new' function.

Remediation

Validate all URLs before instantiating contracts, use allowlists for trusted domains

Secure example

```
Bank myContract = Bank(address(0xTrustedContractAddress));
```
