

OASIS Security Report

Executive Summary

Date: 2026-06-11 13:25:41

Model: mistral:latest

Overview

Analyzed 0 vulnerability types across the codebase.

How to read this executive summary

The tables below group analyzed files by **embedding similarity** between each vulnerability type and the file (cosine similarity). This ordering reflects **retrieval relevance**, not exploit severity and not the severity labels inside per-vulnerability JSON/HTML reports.

Tiers: strong (similarity ≥ 0.80), moderate ($0.60 \leq \text{similarity} < 0.80$), weak (similarity < 0.60). For authoritative finding counts and severities, open the linked vulnerability-type reports.

Models Used

- Deep model: mistral:latest
- Small model: llama3.2:3b
- Embedding model: nomic-embed-text

Scan Progress

Status	Completed vulnerabilities
Partial (scan in progress)	0/25
- Current vulnerability: Authentication Issues	

Pipeline phases

Phase	Status	Progress
Embeddings	complete	14/14
Discover candidates	complete	25/25
Structured chunk scan	complete	1/1
Context expansion	complete	1/1
Deep analysis	in_progress	0/25
Verify structured output	pending	0/1
